- Multi-level group security and SSL support
- Built to adapt - configure and customize to match the way you work
- Up and running in days
- Enforce business process rules
- Part of a complete CRM solution

Soffront Asset Manager provides you with complete visibility into your corporate assets. It gives you the information you need to optimize equipment performance, track software assets, and make financial and operational decisions that maximize asset performance. Soffront Assets helps manage your portfolio of assets – whether they are IT or fixed assets like tables/chairs.

From the time of deployment through operation, maintenance and retirement, Soffront Asset Management will track the lifecycle of each item. Reduce asset related expenses and enhance employee/asset productivity. Streamline disaster recovery and asset disposal plans. Mitigate the effects of software license compliance audits.

Find Assets and Keep Track

With Soffront Asset Management, you can tag your asset, know where it is at all times and who is using it. The solution can even locate IT assets automatically and provide a complete audit of local systems. Computers on your network can be included or excluded from the audit list easily to provide you with precise auditing of departments, regions or more finite groups.

Seeing a Complete Picture

Soffront Asset Management is designed to provide you with a clear, more complete view of your assets. With such complete access to information, you can make fast, informed decisions about equipment deployment, procurement and true project costs. Your organization can put asset management procedures in place to improve equipment reliability, reduce operating costs, increase asset utilization and product, manage cash flow better through less duplication of existing assets and reduce overall expenditures.

Enhance Asset Maintenance

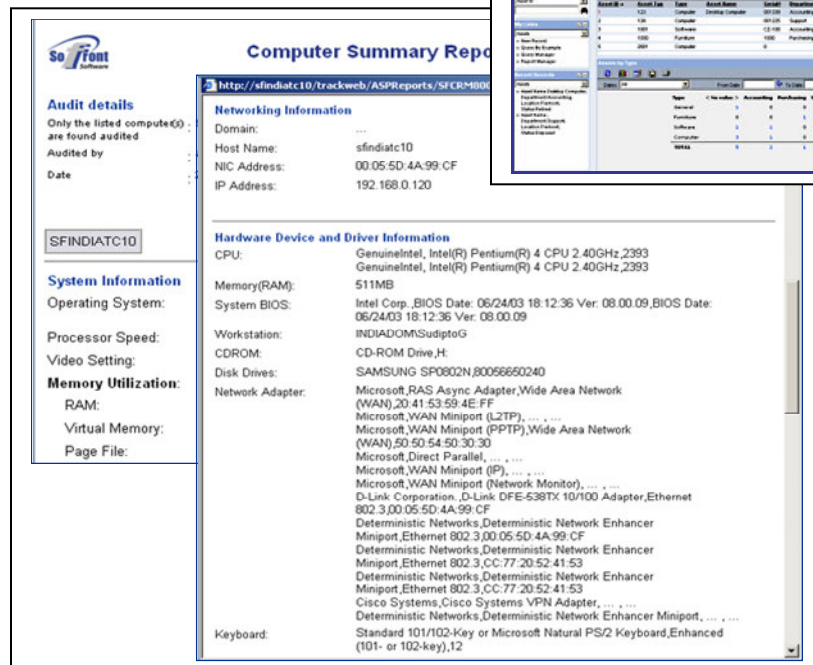

With Soffront Asset Management, you can schedule equipment service to keep all assets in top shape. Examine asset history to determine how often failures occur, how to prevent them and how equipment failures are impacting your costs. Use asset management to track warranty obligations, vendor agreements, and prevent missed expiration dates. Monitor the status of physical assets to know when it will be out of service and when it is expected to be up and running again.

Asset Dashboard

Asset ID	Asset Name	Location	Status	Warranty	Contract
100	Computer	Support	Normal		
101	Computer	Support	Normal		
102	Software	Accounting	Active		
103	Hardware	Printing	Normal		
104	Hardware	Support	Active

Contract Management

Soffront Asset Management helps you to manage contracts and License agreements. Track the status, type, terms, expiration and other vital information regarding lease, software license, warranty, and maintenance contracts. Link contracts with specific assets to generate an asset wise contract view.

Comprehensive Queries & Reports

Soffront Sales comes with several pre-configured queries and reports. Create queries and reports easily without help from IT. Render reports in text format or colorful graphics, including trend lines, bar charts and pie charts. Custom graphic reports can even feature immediate detail through clickable drill down.

Enforce Business Process Rules

With Soffront Business Rules, you can define notifications based on complex criteria, such as record history values.

Soffront CRM Solution

The Soffront CRM solution spans sales, marketing and service functions. The complete suite is available as the Soffront CRM application.

Flexible Licensing

Soffront offers an end-to-end CRM solution. However, because the Soffront solution is modular, you don't need to deploy the entire solution at once. Select the modules you need today, and activate the rest when you are ready. Soffront offers very flexible licensing options - floating, dedicated, site, departmental, timed or leased licensing options. You can also select either hosted or server licensing.

The Soffront Advantage

- Over 13 years of product maturity
- Unmatched adaptability
- Deployed in days
- Zero footprint web-client

Asset Management

- Standard dashboard configuration, reports and queries for IT Manager and Help Desk Agents user roles.
- Integrated with all other system modules.
- Workflow and process management.
